

Brain Damage Caused by COVID-19 mRNA Vaccines

Two massive South Korean studies shake things up

Study #1: ([2024 May 28, Jee Hoon Roh et al](#))

Japanese Neuroscientist Dr. Hiroto Komano Alarmed at Explosive Dementia Surge Amongst COVID Vaccinated Individuals: Massive Study of ~600,000 Reveals

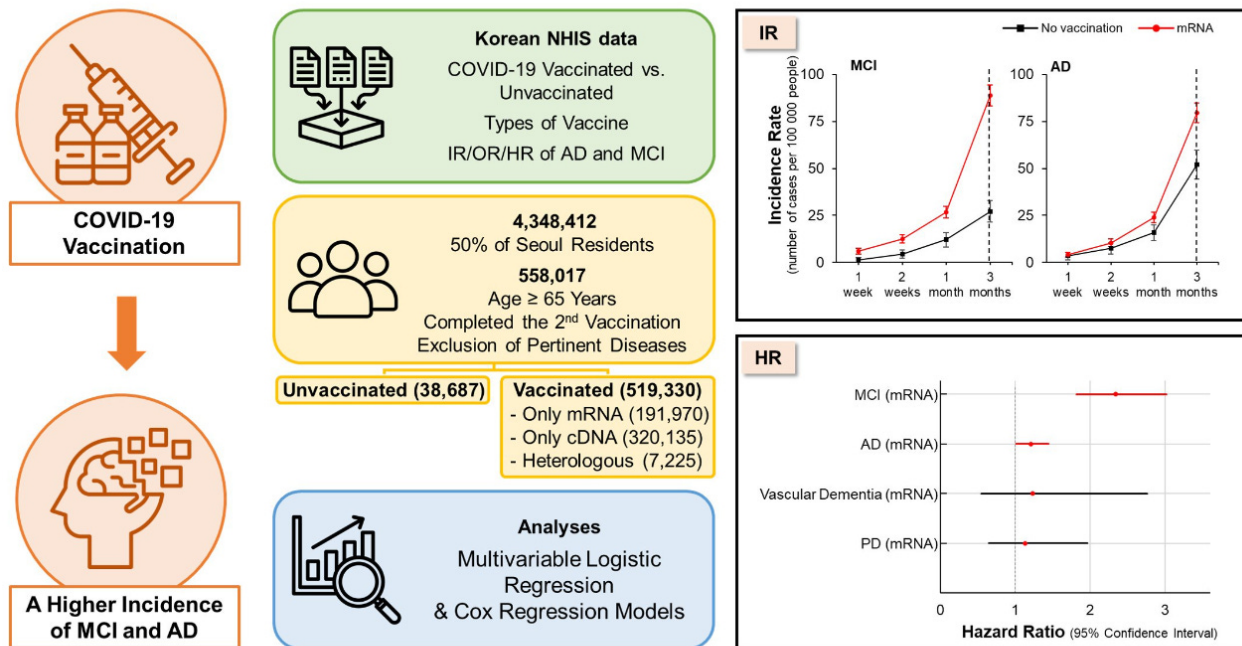

In a [recent episode](#) of Masako Ganaha's Channel posted on June 16th, 2024, [Professor Dr. Hiroto Komano, a renowned neuroscientist and professor in the Department of Neuroscience at the Faculty of Pharmaceutical Sciences, Iwate Medical University](#), shared his serious concerns about the link between COVID-19 vaccination and a increase in dementia cases.

Dr. Komano has an impressive academic pedigree. After graduating from the Faculty of Pharmaceutical Sciences at the University of Tokyo, he served as an assistant at the university and held research positions at Stanford University and the University of Michigan Medical School in the United States. He also served as a laboratory director at the National Center for Geriatrics and Gerontology in April 2007. His primary research focuses on understanding the molecules involved in the onset and prevention of Alzheimer's disease.

During the interview, Dr. Komano talked about a [study from South Korea, recently published in the International Journal of Medicine by Roh et al.](#) on May 28, 2024.

This study looked at health data of 519,330 people who got two doses of the COVID-19 vaccine. and they compared these vaccinated individuals to about 38,687 people who didn't get the vaccine.

A Potential Association between COVID-19 Vaccination and Development of Alzheimer's Disease

COVID-19, Coronavirus Disease 2019; NHIS, National Health Insurance Service; AD, Alzheimer's Disease; MCI, Mild Cognitive Impairment; PD, Parkinson's Disease; IR, Incidence Rate; OR, Odds Ratio; HR, Hazard ratio.

Dr. Komano highlighted several troubling findings:

Firstly, it showed that the incidence of mild cognitive impairment (MCI), an early stage of dementia, more than doubled among vaccinated individuals compared to unvaccinated (+140% increase).

Furthermore, within three months post-vaccination, the number of vaccinated people who developed dementia, including Alzheimer's disease, increased by 23% compared to unvaccinated.

He emphasized the concerning rise in dementia cases, stating, "An increase in dementia would be disastrous. The elderly who survive but are left with a higher risk of developing dementia." Currently, "one in five people over the age of 65 already have dementia." The situation could worsen dramatically, with Dr. Komano cautioning, "This means it could become two in five people." If vaccination continues unchecked, the number of dementia cases will only rise, posing a significant public health challenge.

In addition to the findings on the potential link between COVID-19 vaccination and dementia, Dr. Komano expressed grave concerns about the broader implications of administering such vaccines. He warned, "Administering this vaccine, whether it's a COVID-19 vaccine or a replicon vaccine, leads to weakened immune systems due to the induction of IgG4, and people die from other diseases." Dr. Komano also highlighted the potential detrimental effects on children and birth rates.

Criticizing the experimental nature of the COVID-19 vaccine, Dr. Komano expressed his belief that the risks associated with the vaccine are considerable. He warned that *dementia cases are likely to increase significantly if vaccination continues*, especially among the

elderly. Dr. Komano stressed the importance of further research to understand the long-term effects of the vaccine on cognitive health.

Dr. Komano also highlighted the critical need to investigate the issue of vaccine/spike protein shedding, expressing profound disbelief at the current situation: *“None of this has been properly studied, and yet they are developing the next replicon (mRNA) vaccine. It’s unbelievable that they’re also developing other vaccines with messenger RNA.”*

Joining the discussion, eminent molecular biologist [Dr. Hiroshi Arakawa](#) highlighted the systemic issues in the research community. He pointed out that for many researchers, the focus is on securing funding and career advancement, which often means avoiding topics that don’t attract monetary support or lead to high-profile publications.

He noted, *“Moreover, making such announcements can get researchers reprimanded by their institutions,”* drawing parallels to a recent incident in the Netherlands where the Princess Maxima Centre attempted to censor and reprimand the lead author of a BMJ article that urged governments to explore potential mRNA gene therapy harms.

*

Study #2: ([2024 June 4, Hong Jin Kim et al](#))

This study is aimed to investigate the psychiatric AEs after COVID-19 vaccination from a large population-based cohort in Seoul, South Korea.

We recruited 50% of the Seoul-resident population randomly selected from the Korean National Health Insurance Service (KNHIS) claims database.

A total of 4,348,412 individuals living in Seoul, South Korea, constituting 50% of the population, were included and investigated

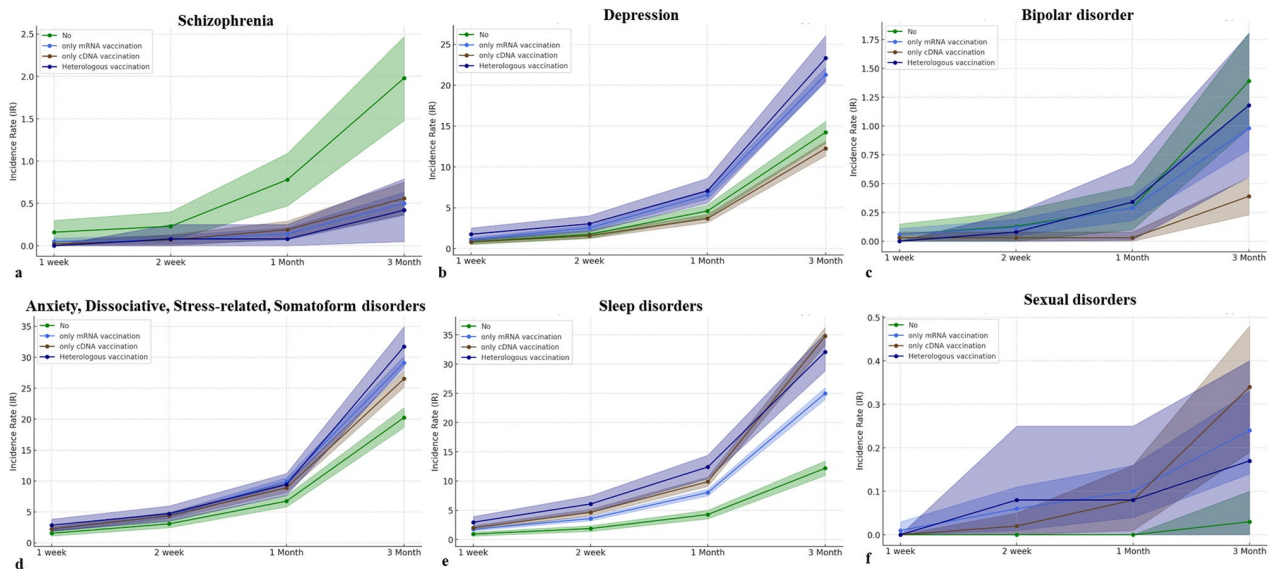

The cumulative incidences per 10,000 of psychiatric AEs were assessed on one week, two weeks, one month, and three months after COVID-19 vaccination.

Results

Cumulative incidence of depression, anxiety, dissociative, stress-related, and somatoform disorders, sleep disorders, and sexual disorders at three months following COVID-19 vaccination were higher in the vaccination group than no vaccination group.

- Depression +68%
- Anxiety, dissociative, stress, somatoform +44%
- sleep disorders +93%

Schizophrenia and bipolar disorders showed lower cumulative incidence in the vaccination group than in the non-vaccinated group.

*

Study #3: ([2024 Apr. 11, Lazareva et al](#))

Our systematic review aimed to examine cases of new-onset psychosis following COVID-19 vaccination.

We conducted a systematic review of case reports and case series on new-onset psychosis following COVID-19 vaccination from December 1st, 2019, to November 21st, 2023

A total of 21 articles described 24 cases of new-onset psychotic symptoms following COVID-19 vaccination

54% were female, mean age 34 years, mean onset time was 6 days.

Duration of psychotic symptoms ranged between 1 and 2 months with a mean of 52.48 days.

Blood test abnormalities were noted in 50% of cases, mainly mild to moderate leukocytosis and elevated C-reactive protein (sign of inflammation).

Magnetic resonance imaging results were abnormal in 20.8%.

Overall 50% of patients achieved full recovery (50% didn't).

CONCLUSION: "Data suggest a potential link between young age, mRNA, and viral vector vaccines with new-onset psychosis within 7 days post-vaccination."

"Collecting data on vaccine-related psychiatric effects is crucial for prevention, and an algorithm for monitoring and treating mental health reactions post-vaccination is necessary."

*

My Take...

Pfizer and Moderna COVID-19 mRNA Vaccines cross the Blood Brain Barrier (BBB).

We are now starting to get solid evidence of BRAIN DAMAGE caused by COVID-19 mRNA Vaccines.

To Summarize, if you get COVID-19 Vaccinated:

- at 3 months: +140% had mild cognitive impairment
- at 3 months: +23% had Alzheimers Dementia
- at 3 months: +68% had Depression
- at 3 months: +44% had Anxiety, dissociative, stress, somatoform disorders
- at 3 months: +93% sleep disorders
- within 7 days: increased risk of psychosis, highest risk age 34, with only 50% chance of recovery

These are massive studies and the evidence of BRAIN DAMAGE is undeniable.

Have you noticed: two studies from South Korea and one from Latvia, where doctors can still be doctors, apparently.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and relentless assault on liberty and the goodness of people, Chossudovsky's book is a rock upon which to sustain our fight. —Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test – which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —Peter Koenig

Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. —David Skripac

A reading of Chossudovsky's book provides a comprehensive lesson in how there is a global coup d'état under way called “The Great Reset” that if not resisted and defeated by freedom

loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. -Edward Curtin
